

ATTRACTIONS

ATTRACTIONS AND SPECIAL EFFECTS

Offering Something Extra Special

People remember an interesting water slide; but special effects and attractions go beyond a slide's design and layout to create a lasting memory.

Seeing, hearing and feeling – our most powerful senses – can be stimulated by light, water and sound effects as well as interactive elements.

We would like the opportunity to tell you about the many available options for making a water slide even more attractive. Why not set up a personal appointment today? Take advantage of our expertise when choosing special effects for your waterpark.

Discover the possibilities and offer your guests a memorable sliding experience

Cirque de Saimaa spa, Saimaa, Finland

INFINITY-JUMP

«To infinity ... and beyond!»

The Infinity Jump is an add-on component for tube slides that includes an integrated jumping ramp with a steep downward slope, which is hidden from the slider's view. An optical illusion is installed at the upper end of the jump element and shows the tube continuing straight ahead. The sudden drop, located out of view, lets you experience an unexpected thrill.

Alternatives to this optical illusion include a wide range of integrated light, water and sound effects. The latest innovation on the water slide market is a video screen with waterproof LED panels, which can be built into the slide components. There is no limit to the effects you can add!

A guaranteed rush with the Infinity Jump

THEMING AND STORYTELLING

Create a new world

Theming and storytelling are great ways of bringing emotions into your guests' sliding fun. The ride becomes an intense sensory experience that allows sliders to leave the daily grind behind and dive into another world, becoming part of the story themselves. The increased adventure factor turns the water slide into a new world waiting to be discovered, leaving your guests with lasting memories that keep them coming back for more and distinguishing your waterpark from the competition.

Klarer Freizeitanlagen AG offers a variety of theming and storytelling concepts for water slides. Special light, water and sound effects as well as interactive elements and creative presentation possibilities will fascinate you and your guests. We would be happy to show you many examples of our work in this area from completed projects in Germany and Switzerland. Let us show you our newest developments and options.

Get ready to be wowed!

LIGHT

A Colorful Palette for Painting with Light

Natural Shine is an innovative manufacturing technology developed by Klarer. The insertion of translucent segments into the slide components allows daylight to enter and produces impressive lighting effects.

Running-Lights are circular strands of lights, which can be programmed with different patterns and intervals.

LED-RGB lights allow a smooth and continuous mix of colors. Many effects can be programmed – a gentle flow from one hue to the next creating a relaxing ambiance or a lightning-quick change of color to give guests that disco feel.

Backlit pictures and artwork offer a wide variety of special effects with natural or artificial light.

Using **LED-Flash** lamps allows you to create strobe effects at varying intervals for your own lightning storm or a slow light show. This choice is yours.

The latest innovation on the water slide market: a video screen with **waterproof LED-Panels**, which can be built in and onto the slide components

WATER

Feel it

A Tropical Rain showers over the water slide, gently soaking sliders along the way. Whether after a curve, in a dark Black Hole or as a theming element, the Tropical Rain effect is an unexpected pleasure.

Looking for something more intense? The action-packed Waterfall turns calm waters into a raging river. There is no escape, as 65 m³/h flow through the slide, carrying sliders through the wall of water. Be sure to hold your breath!

SOUND

Hear it

If you want to create a mood, sound effects are a great way to go. Whether a jungle expedition, an adventure on the high seas or a trip into space, we have the right sound for your slide.

From popular titles to customized sound effects – the effects always match the rider's sliding speed.

INTERACTIVE

Touch it

Touchpoints are interactive, touch-activated light points mounted in the start area or at points along the slide route. Touchpoints can activate light, water and sound effects – or a combination of these.

Bring added action to the sliding experience using Touchpoints in combination with a point system. Who will reach all the sensors and get the most points? This interactive experience with scoreboard and everything you need for real fun.

TIMING

Measure it

Water slides that operate at full capacity help reduce crowding in other areas of the waterpark. Increased capacity on a water slide is achieved by encouraging guests to do multiple runs. Timing each run is the ideal way to increase sliding interest. A healthy spirit of competition drives guests to go faster – maybe even clocking the fastest time of the day – and increases overall slide use. Additionally, operators can host race events with multiple heats, prizes, etc.

COLOR SCHEMES

Colorful

Who wants a boring water slide? Full color is the way to go! Water slides made from glass fibre reinforced plastic provide many more options for the infusion of color according to the classic RAL system than any other materials. Give your guests more than everyday grey. Water slides from Klarer Freizeitanlagen AG, a treat for the eye in any leisure park.

TRANSPARENT SLIDE COMPONENTS

100% transparency

Plexiglas elements built into a water slide give guests the feeling of floating on air before they plunge back into the depth of the tube. Transparent segments are also an eye-catcher for spectators!

DROP START

It's all about getting off to a good start!

How can you do better than the Turbo Slide or the Loop? It all depends on how you get started.

Waiting on the platform at a dizzying height, cooled by a light water mist that fills the Plexiglas capsule, the countdown quietly begins as the adrenaline surges and all you can hear is your own heartbeat pounding. Suddenly, the trapdoor opens beneath your feet and you are in free fall through the Plexiglas tube, you hold your breath to feel the acceleration in the first few seconds. This is the ultimate kick!

The system is fully automated and does not require additional personnel for operation. The technology meets the highest quality and safety standards. Even in the case of a defect in the control circuit, secure systems prevent dangerous situations from arising.

Not for the fainthearted – the classic Drop Start. Overcome your fear as you reach for the bar. Hanging over the chasm, all you hear is the rushing water below. Hold on or take the free fall – will nerves or strength decide?

An attraction that guarantees added value
