## Acquaworld Concorezzo Milan

Near Milan, a **superlative leisure project** is emerging.  
**The water and wellness park Acquaworld Concorezzo.**

It will be the largest canopied water and wellness park ever built in Italy and doesn't need to hide its light under a bushel when compared Europe-wide.

The future programme for Acquaworld is extremely diverse and serves the interests of all age groups. The park is set up for up to 1500 visitors at a time.

There are various activity areas which supplement each other – adventure area, FUN area and a wellness and relaxation area. 12 inside and outside pools and a garden of more than 7000m<sup>2</sup> speak for themselves.

The underlying theme of the giant leisure park is water. Water in all variations and application possibilities. This includes water slides.

In the adventure area consequently **the largest indoor water park in Italy** will be built.

With the newest generation of water slides by Klarer Freizeitanlagen AG up to a length of 1070m.

There will be pure sliding enjoyment on the following slides:

<b>Tube Slide Black Hole</b>	<b>169 m</b>
<b>Tube Slide Black Hole</b>	<b>155 m</b>
<b>Rafting Slide Magic Tube</b>	<b>173 m</b>
<b>Rafting Slide Magic Tube</b>	<b>160 m</b>
<b>Turbo Slide</b>	<b>81 m</b>
<b>Turbo Slide</b>	<b>100 m</b>
<b>Rafting Slide Magic Eye®</b>	<b>158 m</b>
<b>Space Bowl Abyss®</b>	<b>62 m</b>
<b>Triple Slide</b>	<b>12 m</b>

The visitor has the choice. Variety and joy are guaranteed.

## Newsflashes

### KuBa Freizeitcenter AG Rheinfelden

KuBa Freizeitcenter AG Rheinfelden (CH) assigned Klarer Freizeitanlagen AG to erect a **67m-long water/tube slide**, combined with a **kamikaze slide**.

### Stadtbad Trier

The Stadtbad Trier (DE) is being completely refurbished and has got a new **70m long tube slide from Klarer and a slide tower**. The system fits in well with the listed building and contributes to the upgrading of the swimming baths.

The slide is fitted with LED RGB, Running Light, Slide Protector and time measurement. The slide is fitted with a heat and sound proofing system from Klarer.

### Vienna Hütteldorf

In Vienna Hütteldorf (AT) Klarer Freizeitanlagen AG received an order to replace an existing water slide with a **new 62m long tube slide**.

### Hradec Kralove

Klarer Freizeitanlagen AG delivered a **High Fly water slide, the popular jump slide** for a new water slide system in Hradec Kralove (CZ).

High Fly water slide here in Filderstadt

### Georgsmarienhütte

The new, **75m-long tube slide** in the Panoramabad Georgsmarienhütte (DE) will be inaugurated with the new opening of the baths in October 2009.

### Wittingen

Wittingen (DE) received a **super slide** from Klarer Freizeitanlagen AG's new range of **stainless steel** slides. The slide is 12m long and 3m wide.

### Kaufbeuren

The town of Kaufbeuren (DE) is taking measures to make the swimming pool at Berliner Platz more attractive. So Klarer Freizeitanlagen AG delivered one of their tried and tested **super slides** made of GRP. The slide is 18m long and 3m wide.

### Olten

The **new tube slide** in the Olten (CH) swimming pool has already attracted noticeably more visitors in its first season. The investment paid off.

## Locarno

### To loop the Loop! Now also in Switzerland

Now the time has arrived in Switzerland. The **first looping water slide** will be inaugurated at the end of October 2009.

As already mentioned Klarer Freizeitanlagen AG is building a large water slide system for Centro Balneare Regionale di Locarno SA in Locarno, in Tessin.

Consisting of **2 tube slides, 117 and 80m long**, equipped with various light effects, a 49m-long **Space Bowl Abyss®** and the **looping slide**, the system is sure to be one of the attractions of the region.

The special attraction will be the looping slide and will attract lots of visitors.

The experiences with the first looping slide in Germany in AquaMagis Plettenberg shows that it will be a crowd puller. After opening the looping slide in September 2008 there were more than 100,000 extra visitors.

### Bad Bentheim

The new **tube slide** in the Hallen- und Freibad Bad Bentheim (DE) was manufactured in compliance with the contract and is available to visitors as a new attraction of the pool.

Following the example of the "Indian Summer", this slide was colourfully designed with decorative autumn motifs of leaves and plants. Particularly on the inside there are wonderful light effects, called up simply by the **translucent portrayal of the motifs**.

## Ready-for-use construction

From planning to implementation and maintenance all in one place.

This principle of the efforts of Klarer Freizeitanlagen AG for all round satisfied customers now has an even further reaching significance. In collaboration with competent and tried and tested companies Klarer Freizeitanlagen AG also **plans and builds the water technology and the foundations**. Everything you could need to build the water slide right up to start up and turnkey erection of a slide tower.

We take on all responsibility and obligations regarding on-time and contractually compliant fulfilment of the construction procedure. Therefore the high standards of innovation and quality also apply to these building services, in a tried and tested manner.

Thalassa Freizeitanlagen is a high performance partner as a general contractor for Klarer Freizeitanlagen AG.

## Water slides made of stainless steel

**New slides made of stainless steel** form an addition to the all round renowned range of water slides from Klarer Freizeitanlagen AG.

As half shell slides 55cm to 120cm wide these slides stand out due to the diverse possibilities of a curvy sliding treat.

The tunnel effect is added in the tube slide. Even more excitement, even more fun with the same variation possibilities.

Hotel Berghof

Additional **stand slides and box slides** with ladders, in various sizes and shapes, are also available at good prices. These too will provide a lot of fun of sliding and can be assembled quickly and easily in any location.

All stainless steel slides also adhere to the relevant norms and the high quality standards of Klarer Freizeitanlagen AG.

## New slides by Klarer Magic Tube und Magic Slide

An innovation is the **Magic Tube slide** modified with Magic Eye® which is **1.6m wide and 1.4m high**.

Due to the compact dimensions the Magic Tube offers even more opportunities for baths that don't have much space and can be used with individual and double tyres.

The Magic Tube is also available as an **open variety, the Magic Slide**.

A new highlight from Klarer, the ideal addition between the Rafting Slide and Magic Eye.

This collaboration paid off when erecting the looping slide with a slide tower in Plettenberg and a tube slide with a slide tower in the Eifel baths, Bad Münstereifel.

At the moment a tube slide with a slide tower is being built at the town baths in Trier.

**Everything in one place, the complete service!**

**For the relief and satisfaction of the customers.**

The **super slides made of stainless steel** also stand for almost unlimited usage possibilities and lots of fun, above all when sliding together. Super slides offer a high level of flexibility due to the free choice of width and length of the slides, only limited by the relevant specifications of the DIN norms. Don't forget there is also the possibility of choosing position. Only the super slide offers this.

Wittingen

## Heat insulation

Energy costs are a significant part of the operating costs to be covered for swimming baths.

Energy saving measures not only serve to lower costs, they also protect the environment for everyone else.

A contribution to energy saving is the **heat insulation from Klarer**.

Now it has proven itself time and again and is increasingly in demand.

The most recent calculations showed that actually **up to 97% of energy on water slides can be saved**.

A calculation example shows this.

For a 100m-long tube slide (radius 120cm) with an operating time of 12 hours and a water temperature of 27°C in the slide, the energy usage through heat loss is 240,333kWh per year.

For the same slide with insulation and outer casing the energy usage is just 8,085 kWh per year, therefore a saving of 97%.

The costs for heat insulation are redeemed differently according to data such as energy prices, type of heating and financing model. If required, Klarer Freizeitanlagen AG would be happy to compile a corresponding amortisation calculation for you.

In any case heat insulation is always an investment that pays. As a further effect, noticeable sound proofing is also achieved.

## Planning in 3D

For more than a year now Klarer Freizeitanlagen AG has now been successfully planning their systems in 3D.

**In this way the customer can see a realistic picture of the slide system even in the planning phase.**

An efficient solution to plan the slide and surrounding area optimally with architects, planners and customers.

The course of the slide can be assessed, as well as the optical impression and the supports. An overall illustration that is accurate in every detail facilitates planning in every regard.

The planning team at Klarer Freizeitanlagen AG looks forward to being able to make this service available to all customers.

3D data formats such as 3DS, C4D, DWG and DXF among other things can be read in and issued.
