## Ready to use installations in Les Bains de Saillon

Klarer Freizeitanlagen AG was contracted to supply a ready-to-use installation.

A harmonious but also colourful slide with a children's pool now decorates the thermal bath Les Bains de Saillon (CH).

We supplied a **water slide** with a total length of 91m, combined with a **tube slide** of over 37m. We also supplied a 25m long wide slide, a **children's pool** and all the relevant **building works** as well as the **water technology**.

The installation which was completed in cooperation with Thallessa GmbH was opened to customers, ready for use, in July 2010.

## AquaParc Le Bouveret

The AquaParc Le Bouveret (CH) is known for its many exciting attractions with water slides over 1km long. Since May 2010, the Booster Loop has been operational- a **looping water slide from Klarer**. This installation was also supplied ready to use, complete with the building work and water technology.

The newly developed transparent drop-start slide and transparent slide tubes provide an extra attraction for both the users and the spectators of these spectacular slide amusements.

With over 100m slide length and speeds of up to 65km/h, the loop is an exciting and thrilling experience, guaranteed!

## News flash

### Lingen

The longest **tube slide** in Emsland, with a length of **100m**, is the new main attraction at the Linus-Bad in Lingen (DE) and was built by Klarer.

This is supposed to be an attraction especially for the young. Rainbow lights fill the dark tunnel with all the colours of the rainbow. Translucent strips also produce additional lighting effects.

### Forchheim

The Königsbad in the Franconian royal city of Forchheim (DE) has now received it's king of slides.

**135 m** of „head to toe skin-tingling thrills“ on the longest slide in Northern Bavaria.

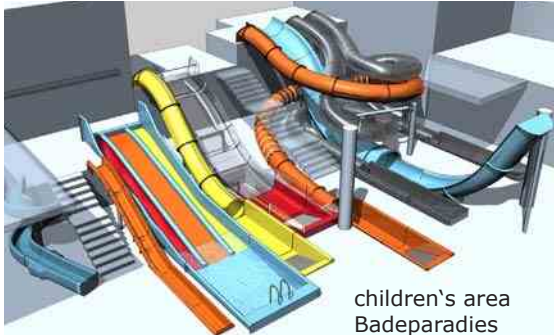

The **65m long high-speed slide** gets the adrenalin pumping.

There is also the no less popular **12m long super slide**.

The Königsbad is fit for a king with slides from Klarer.

### Badeparadies Schwarzwald

The children's area of the new Badeparadies Schwarzwald - Titisee (DE) will be fitted **with water slides exclusively from Klarer**. With a total of **12 slides**, children will be spoiled for choice. They will have to choose between the snake slide with changing colours, a triple slide, tube slides of varying lengths made from stainless steel and fibreglass, the **Magic Slide-halfpipe** and a **completely transparent wide slide**. It has everything you could wish for, fun for all the little ones guaranteed.

### Fiss

The Schlosshotel in Fiss (AT) was the first to be fitted with the **newly developed Magic Tube** slide. With comfortable sliding over a **length of 45m** and a double twist, it will be an instant hit with children and young people at the new Splash Wasserwelt.

Into the big indoor youth pool, the tyre slide leads right next to a wave slide.

### Bielefeld

New swimming pool amusements have also been installed in the centrally situated Wiesenbad in Bielefeld (DE).

BBF Bielefelder Bäder und Freizeit GmbH donated a giant water slide to the outdoor pool with a **length of 104m** and a connected safety outlet.

### Arosa

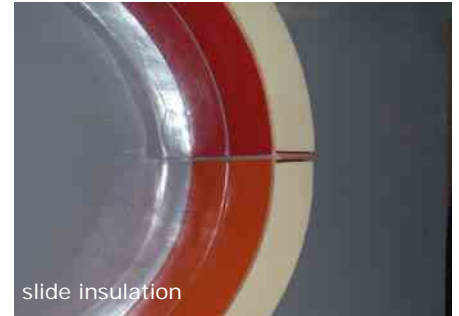

Another hotel is being fitted with a slide from Klarer.

**Hotel BelArosa (CH)** decided on a **25m long tube slide**.

## Passive house - indoor swimming pool / insulation

Taking the newly built leisure pool Bambados in Bamberg as an example, it becomes clear that **energy saving** is becoming increasingly important in the operation of swimming pools.

The indoor swimming pool has a passive house structure. An integral part of a passive house is good insulation and the reduction of energy loss through heat transfer and ventilation.

Energy restructuring is now also on the agenda of local authorities and those operating swimming pools and is subsidised by the German economic stimulus plan.

By **insulating the tube slides** we can aim for a target **energy saving of up to 96%**. An investment that pays for itself.

This heat insulation of tube slides not only saves money, it also helps to protect the environment. **Klarer Freizeitanlagen AG has recently fitted slide insulation in pools in Bern Brünnen (CH), Trier (DE), Pontresina (CH), Lenzerheide (CH), Örnköldsvik (SE) and Schlosshotel Fiss (AT).**

## Acquaworld Concorezzo Milan

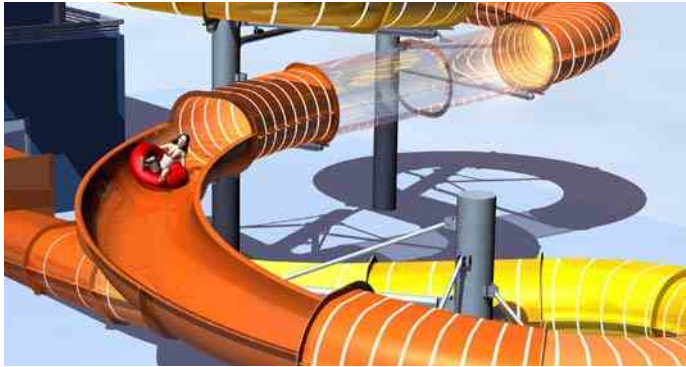

We already reported on the leisure project Acquaworld Concorezzo in Milan in Klarer news issue 4.

The construction of the **biggest indoor water and health and spa park in Italy** is advancing well. Fitted with a FUN area, a wellbeing and relaxation area and **9 Klarer water slides with a total length of over 1000m**, the facility is expected to be operational in spring 2011.

## Magic Tube and Magic Slide

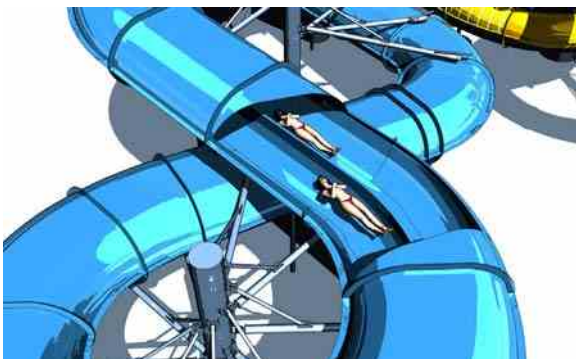

The Magic Tube (closed slide) and the Magic Slide (open slide), first exhibited at last year's trade fair in Cologne have generated great and lasting interest. More **space-saving** and better value compared to the Magic Eye, but with the convenient eye-shaped cross section, these slides are a welcome alternative to the slides that were available on the market up to now. These slides are simply fun, **with or without sliding aids**.

element width : 160cm element height: 120cm oder 140cm

## Magic Twice

Also the new developed Magic Twice with the possibility to **slide down together** and to see the sliding partner. A real, never-before-seen sliding competition experience.

## „High Fly“ water slide

Still worth mentioning is the High Fly jump slide, available exclusively from Klarer.

An exceptional experience combining sliding and flying. Always popular with daredevils.

## Transparent Slides

The new, transparent slides from Klarer. Already successfully installed in Skallerup (DK) and Le Bouveret (CH).

Klarer's newest product is the completely transparent wide slide. This new innovation can be seen at Badeparadies Schwarzwald in Titisee (DE).

## Transparent drop-start Slide

We have just developed a drop-start slide and have applied it to the Booster Loop in Le Bouveret (CH).

This makes the slide experience even more fast-paced and exciting. The slider stands on a trapdoor which opens at the start and only then gives a view to below. Freefall into the void!

# Klarer Freizeitanlagen AG

## 20th anniversary of the company

Everything began with the processing and manipulation of plastics. Silos and mangers were coated with plastic. **The first water slide in Switzerland was constructed in 1981** as a private undertaking by Armin Klarer. 20 years ago, Klarer Freizeitanlagen AG was subsequently founded and established itself **as one of the leaders in the slide market**. Since then the development and construction of water slides have advanced enormously. More and more new ideas were made into a reality. Whether the jump slide or the looping slide, the Abyss or the Magic Eye, something new and improved regularly appears on the market. The safety requirements are now higher. The amount of effort required for maintenance was significantly reduced with the application of hard joint sealing. New features such as time measurement, drop-starts and transparent tunnels make sliding ever more interesting.

A previous spin-off of the processing of plastics was the manufacturing of **sculptures and figurines**. In the past, Klarer Freizeitanlagen AG took part in town events, providing them with animal sculptures and also provided figurines for entire theme parks. With „Art on the Streets“ we display our art in the streets. We offer a wide range of standard products and can make items for every occasion upon individual request. We make anything possible. Great for events, advertising and giveaways.

Klarer Freizeitanlagen AG not only took part in these developments but took a leading role in them. We can now provide **numerous references from all over the world**.
